# Falling Leaves

Brrr! The air is cool and crisp. It smells like earth.

Colorful leaves tumble to the ground. They crunch under feet. This is fall!

# When Is Fall?

The season of fall starts after summer. It ends as winter begins.

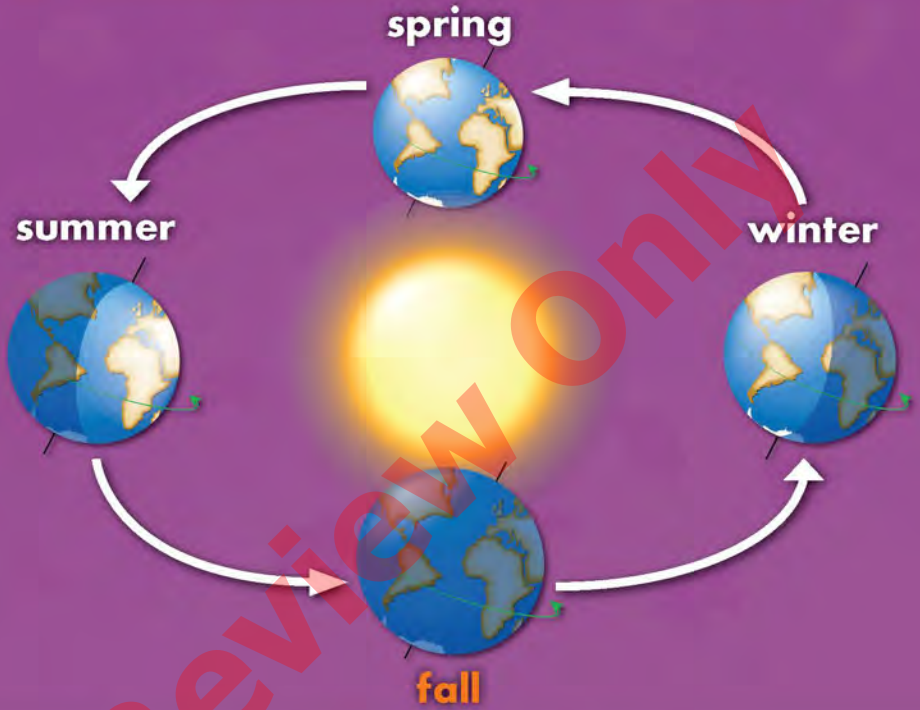

It is also called autumn.

In the **Northern Hemisphere**,  
fall starts in September.

## Earth's Position in Fall

Earth's tilt allows the Northern and Southern Hemispheres to get equal daylight in fall. Days get shorter as winter gets closer.

The main fall months are September, October, and November.
