Earth's Layers

We live on Earth's **crust**.

The crust is our planet's outer layer.

Earth has many layers.

Earth's crust is made of
soil, sand, and rock.

We find soil in fields.

We find sand
at the beach.

We find rocks in
the mountains.

field

beach

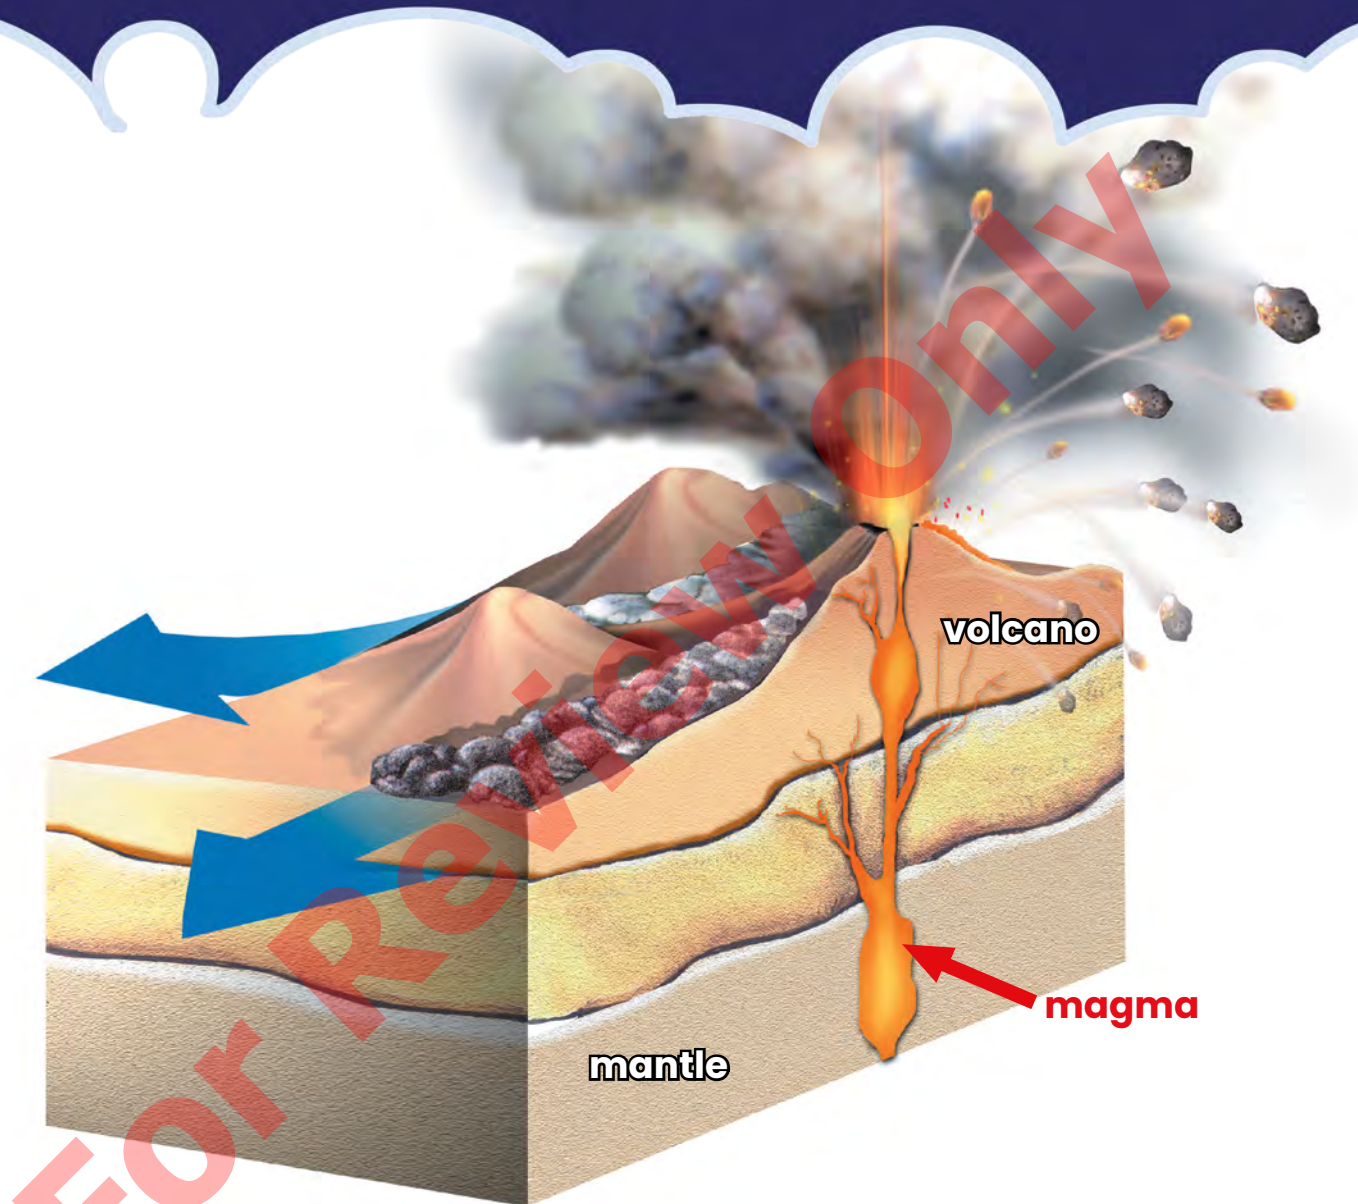

mountains

Miles below the crust is the **mantle**.
The mantle is Earth's biggest layer.

Hot **magma** flows up from the mantle, through **volcanoes** on the crust.
