Our world is full of interesting plants.
Some are green. Others are very colorful.
Some **smell** sweet. Others smell very bad!

Some plants are small. However, some plants
are very big. They are gigantic!

Where do the biggest plants live? Many live in hot, wet forests. They need a lot of sun. Sun and water help plants grow.

The Titan Arum is the world's largest flower.

Asia has many hot, wet forests.
The world's largest flower grows in Asia.
Look at this picture. See how big the flower is!

The world's biggest flower is purple.
It is interesting to see. However, don't stand
too close! This giant flower has a strong smell.
It smells like dead fish!

 Did You Know?

Titan Arums bloom only
once every few years!

When you think of big plants, what comes to mind? Trees? The world's **tallest** trees grow in America. They are called Coast Redwoods.

How tall are these redwoods? They are very, very tall! They can grow up to 110 **meters**. That's taller than many **buildings**!
