CHAPTER 1

WHAT ARE AMPHIBIANS?

A toad sits in the warm sun.

A **salamander** lays eggs in a pond.

What do these animals have in common?

They are both **amphibians**.
Amphibians live part of their
lives in water and part on land.

They are **cold-blooded**.
Their body temperature changes
with their surroundings.

CHAPTER 2

HUGE FROGS

Frogs are a type of amphibian.

Goliath frogs are the biggest frogs in the world.

Goliath frogs can weigh seven pounds (3 kilograms).

That is more than two guinea pigs!

Goliath frogs have big bodies.
Their body can be 12 inches
(30 centimeters) long.

That is as long as a ruler!

Goliath frogs have long
back legs. With their legs
stretched out, goliath frogs
can be almost 30 inches
(76 cm) long.

That's as long
as a skateboard!

DID YOU KNOW?

Goliath frogs
can jump up to
10 feet (3 meters).

That is about the length
of a small room!
