CHAPTER 1

A WALK IN THE RAIN FOREST

Let's walk in a **tropical** rain forest.
This **biome** gets more rain than
any place on Earth.

It is hot, too. After it rains,
you can see steam!

For Review Only

The forest is thick with tall trees.
The forest floor does not get a lot of
sun. Listen. Can you hear the animals?
Rain forests are home to more than
half of the animals that live on Earth.

WHERE ARE THEY?

Tropical rain forests are in South America, Africa, and Asia.

■ = Tropical Rain Forests

CHAPTER 2

THE RAIN FOREST FOOD CHAIN

Plants and animals need energy to grow and move. Food is energy. Plants use the sun, soil, and water to make food. Animals eat plants and each other.

A close-up photograph of a yellow snake with dark brown spots and a red stripe along its back, coiled around a green frog. The snake's head is positioned near the frog's body. The background is a soft, out-of-focus green.

A **food chain** describes the way energy moves through a series of living things. Each food chain begins with plants and ends with animals. Each link in the food chain uses or eats the one that comes before it.
