What Is a Boat?

Boats float on water in lakes, rivers, and seas. Long ago, people learned to make boats to carry people and things.

How Do Boats Float?

Why do heavy boats float in water and small rocks sink?

Gravity pulls things down.

But water pushes them up.

Place a flat piece of foil in water.
Now fold the foil into a small piece.
What happens when you drop it
in the water? Which one floated?
Which one sank?
