Swirling Storm

The Sun shines on
warm ocean water.

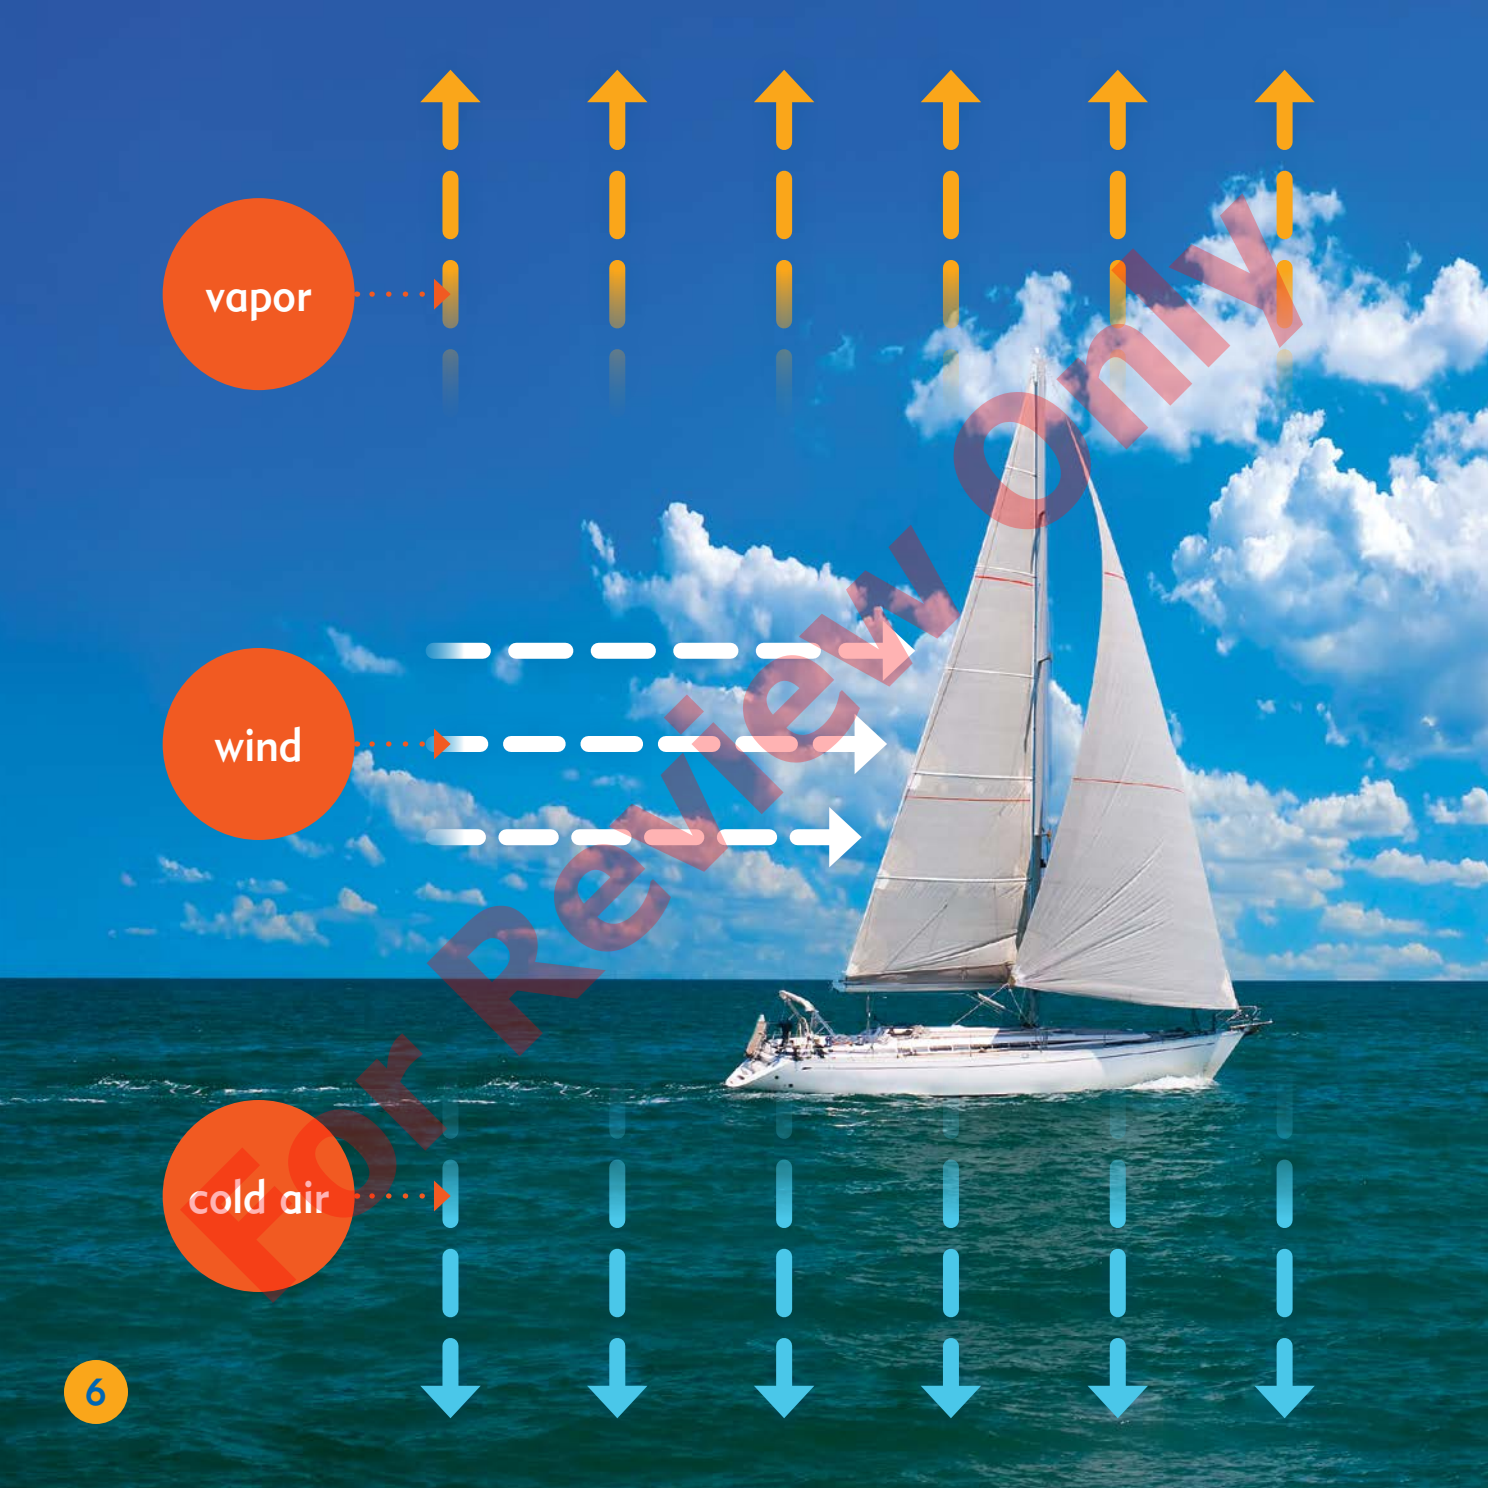

This heats the water more.
Some water turns to vapor.
We cannot see it.

vapor

wind

cold air

Vapor rises.

Cold air sinks.

This makes wind.

Up high, vapor cools.

It turns into drops of water.

waterdrop

A diagram illustrating the process of condensation. A red circle labeled 'waterdrop' is shown with a dotted arrow pointing down to a larger, realistic water droplet. Several other realistic water droplets of various sizes are scattered around the central one. A large, diagonal, semi-transparent red watermark reading 'For Review Only' is overlaid across the center of the image.

The drops make big clouds.

clouds
