Chapter 1

# What Is a Habitat?

A habitat is the place where an animal lives, eats and has its babies. Some animals stay in the one habitat all the time. Other animals move in and out of their habitats.

habitat: rock pool

habitat: coral reef

For Review Only

Most of Earth is covered in salt water. The salt water makes up the seas. There are different habitats in the seas. Many animals live in these habitats.

habitat: open sea

habitat: polar sea

Chapter 2

# Habitat: Rock Pool

Some beaches are covered in rocks. Sometimes there are pools of water in the rocks. These pools are called rock pools.

When the **tide** comes in, water goes into a rock pool. When the tide goes out, water is left behind in the rock pool.

For Review Only

Some rock pools have water in them all the time. Other rock pools dry up. They fill with water again when the tide comes in.

## A closer look:

Some plankton live in rock pools. Plankton are tiny plants and animals that **float** together in the sea. Some sea animals eat plankton.
